ELEVATOR
PRODUCTS & SERVICES

TOP OF CAR RAILS

Hulleman Industries designs Top Of Car Rails to be installed quicker than other rail systems on the market. All rails are designed in accordance with the CSA Standard B44, Occupational Health and Safety Act, the Ontario Building Code, and the National Building Code of Canada. Drawings will be provided with all orders.

MACHINE ROOM & SECONDARY GUARDING

Currently, in Canada, guarding is governed by the following code: CSA Standard Z432. Hulleman Industries reviews each site individually and custom designs & manufactures guarding to meet the requirements of CSA Standard Z432 and the guideline set out in TSSA's document "Elevator Machine Room Equipment Guarding, A Best Practices Guideline Production by Industry Stakeholders."

Drawings will be provided with all Hulleman Industries jobs.

Hulleman Industries considers operator/mechanic safety and equipment serviceability in each design. All items are also designed to be installed easily and quickly. There are two general types of equipment guarding:

- Component Guarding - Fits over/around individual components/parts of a machine
- Global Guarding - Typically a screen that is installed around the equipment.

There are several factors to be considered when choosing which type of guarding to use. Hulleman Industries will help you with these decisions.

CAB & CAB INTERIORS

For 20 years Hulleman Industries has been serving the elevator industry. This has included repair, renovating and replacing of cab interiors through to full cab replacements.

All work is in accordance with CSA Standard B44.

Hulleman Industries will work with our clients to meet the esthetic and architectural requirements of every project.
